

Cortaflex

Constant pounding on artificial, hard or heavy ground is very demanding on joints - even hacking can cause abnormal wear and tear. Feeding a proven joint supplement can help to redress the balance and support healthy joint function.

Cortaflex nutritionally supports the health of every joint in the body, providing nutrients for lubrication and flexibility and improving all-over performance.

Beyond Chondroitin and Glucosamine

Cortaflex has been formulated around the concept that smaller molecules are more likely to be absorbed than larger ones. Cortaflex, therefore, contains the smaller key active isolates of Chondroitin and Glucosamine – Glutamine, Glucuronic Acid, Glutamic Acid, Proline, Glycine, and must not be compared or confused with the many joint supplements that rely on the much larger Chondroitin and Glucosamine molecules.

Cortaflex - the world's number 1 otc equine joint supplement, now contains Hyaluronic Acid.

Hyaluronic Acid

Hyaluronic Acid (HA) is a major component of joint lubricating fluid, essential for absorbing concussion and providing cartilage with nutrients and lubrication for movement.

The Clinical Trial

Cortaflex is the only otc equine joint supplement to have achieved a significant improvement in the symmetry of equine tarsal joint movement following a rigorous double blind clinical trial, conducted by the College of Veterinary Medicine at Michigan State University. This trial, undertaken by one of the leading equine research institutes in the world, used advanced measurement techniques including force plates and motion analysis to ensure that the data collected before and after the supplementation of Cortaflex was of the highest accuracy.

The outstanding results of the study were then presented by the author, Dr. Hilary Clayton BVMS, PhD, MRCVS, at the conference of the globally respected American Association of Equine Practitioners, and published in the conference proceedings.

1 Cortaflex HA Solution and Powder

– Cortaflex fortified with a high level of Hyaluronic Acid

Its never too late! Cortaflex HA has been specially formulated for horses with joints that have experienced excessive wear and tear, and for horses which are competing or in hard work. Cortaflex HA can be fed permanently or as a 'kick start' before maintaining on Cortaflex Powder.

Available in Solution - 946ml (a one month supply), 3.8 and 20ltr - and in Powder 450gm (a one month supply), and 4.5kg.

“To keep my team sound and supple I run them on Cortaflex HA Liquid and maintain them on Cortaflex Powder, and for myself I take Cortaflex capsules.”
Pippa Funnell.

2 Cortaflex HA Paste

Concentrated Cortaflex HA in an easy to administer 3 day paste, ideal as a pre-competition boost.

“Dressage is all about flexibility and power. When it comes to management, attention to detail and quality is the key – that’s why I use Cortaflex HAI think the results speak for themselves.”
Richard Davison.

3 Cortaflex Powder

– fortified with a maintenance level of Hyaluronic Acid.

Highly effective and economic, Cortaflex Powder is the most popular in the Cortaflex range and ideal for young, old, active and retired horses.

Available in 227gm (a one month supply at maintenance), 454gm, 908gm and 3.6kg.
From under 40p per day.
